EDUCATION

Erzurum Technical University

B.Sc. in Electrical and Electronics Engineering

Erzurum, Turkey

Oct. 2021 – Feb. 2026

- **Honors:** Faculty High Honor Student (2021)
- **Relevant Coursework:** Control Systems, Digital Signal Processing, Embedded Systems, Circuit Analysis.

Lublin University of Technology

Erasmus+ Exchange Program, Electrical Engineering

Lublin, Poland

Oct. 2023 – Feb. 2024

- Specialized in international engineering standards and advanced automation systems within a multicultural environment.

EXPERIENCE

Ingeniarius, Lda.

R&D Engineering Intern

Porto, Portugal

Jul. 2024 – Sep. 2024

- Engineered high-fidelity robotic system simulations using **C++** and **ROS**, significantly reducing physical testing requirements and hardware risks.
- Optimized mechatronic performance by integrating advanced sensor data fusion algorithms for precise navigation.
- Collaborated with a cross-functional international team to refine autonomous navigation stacks.
- Conducted rigorous debugging and validation of robotic software in a Linux-based environment.
- **Achievement:** Secured **1st Place** among 8 international teams at the **RobotCraft 2024** robotics competition by demonstrating superior autonomous navigation capabilities.

PROJECTS

RF Signal Modulation Classification with Deep Learning | *Python, TensorFlow, CNN*

2025 – Present

- Developing a **Convolutional Neural Network (CNN)** model to classify radio signal modulations using the **RadioML** dataset.
- Processing raw IQ data to analyze various modulation types (BPSK, QPSK, 8PSK) under varying SNR levels.
- Optimizing hyperparameters and data preprocessing techniques to achieve high classification accuracy.
- Demonstrating the practical application of AI in **Telecommunications** and Signal Processing domains.

Multi-Level SLAM Based Autonomous Robot | *ROS, SLAM, C++, Python*

2024 – 2025

- Designed and deployed a robust real-time SLAM navigation system for a mobile robot using ROS frameworks.
- Developed a comprehensive web interface for multi-level mapping control, enhancing user accessibility.
- Implemented joint optimization algorithms to minimize mapping errors and improve trajectory planning.
- Utilized Python scripts for sensor data processing and C++ for low-level hardware control.

Erasmus+ Club Leadership | *Project Management, Leadership*

2023 – 2025

- Served as President, leading a diverse team to orchestrate large-scale cultural exchange events.
- Managed international mobility projects, mentoring students on Erasmus+ procedures and adaptation.
- Successfully increased active club membership and campus engagement through strategic event planning.

ArsScientia Hackathon Project | *Frontend, RESTful APIs*

2022 – 2023

- Co-developed an earthquake early warning mobile application under tight 48-hour deadlines.
- Engineered the frontend interface and integrated APIs to ensure real-time data accuracy and user responsiveness.

TECHNICAL SKILLS

Robotics & Embedded: ROS (Robot Operating System), SLAM, OpenCV, Arduino, Raspberry Pi, Linux

Programming: C++, Python, C, LaTeX, Bash Scripting

Data Science & AI: Machine Learning (Regression/Classification), TensorFlow, Pandas, NumPy

Simulation & Tools: MATLAB & Simulink (Advanced), LTSpice, AutoCAD

Languages: Turkish (Native), English (B2 - Professional), German (A2 - Elementary)
